

SHASHANK CHOUDHARY

Bengaluru, Karnataka

+91-8050522728 shashank.30choudhary@gmail.com linkedin.com/in/itsshashank github.com/rezbites

PROFILE

Software engineering intern with experience developing scalable ML solutions in Python and building cloud-native infrastructure on AWS. Has practical exposure to ML model deployment, CI/CD pipelines, testing automation, and full-stack development. Proficient in managing cloud infrastructure and developing backend services with the ability to own features end-to-end, from development to production deployment.

EXPERIENCE

Rooman Technologies

Jan 2026 – Present

AI Product Developer Intern

Bangalore, India

- Architected and deployed a production-grade AWS system for an AI-powered social platform from scratch using a single CloudFormation template (IaC) covering VPC, ALB, ECS Fargate, RDS PostgreSQL 16, ECR, S3, IAM, Secrets Manager, and CloudWatch — enabling one-command environment teardown and recreation.
- Engineered a sidecar container architecture on ECS Fargate, co-locating REST API, LLM interview service, and NSFW classifier in one task via **AWS VPC** — replacing cross-network HTTP with localhost calls, cutting ML microservice latency by ~60–70% and saving \$30–50/month by consolidating 3 Fargate tasks into 1.
- Built a fully automated CI/CD pipeline (GitHub Actions, 5 sequential jobs) with infra validation, lint checks, CI tests for applications, Trivy vulnerability scans, parallel Docker builds, ECR pushes tagged with git SHA, smoke tests, deployment gates, and zero-downtime ECS rolling deployments on every push to **main**.
- Implemented self-healing infrastructure: pipeline auto-creates the CloudFormation stack if absent, detects and applies IaC diffs, and handles in-progress states — all without human intervention.
- Secured secrets via AWS Secrets Manager with scoped least-privilege IAM roles per ECS task; monitored and resolved production issues through log analysis, metrics monitoring, root cause analysis, and system optimization across ECS startup, ALB routing, RDS connectivity, and container health checks using CloudWatch.

CodexIntern

Jul 2025

Machine Learning Intern

Remote

- Built and deployed ML-based backend APIs using Python, Scikit-learn, and Flask/FastAPI with automated preprocessing pipelines.

PROJECTS

Smart Product Pricing | Python, TensorFlow/Keras, PyTorch, LightGBM

10 2025

- Designed and built an end-to-end pricing intelligence system using a multimodal stacking ensemble combining structured data, text, and image features.
- Implemented a scalable ML pipeline with EfficientNetB0 and DistilBERT, optimizing GPU memory usage to resolve Out-of-Memory (OOM) issues.
- Validated model outputs using automated test datasets and repeatable evaluation pipelines for performance consistency.

AI-Powered Wealth Assistant (RAG Model) | Streamlit, LangChain, Google Gemini API, FAISS

08 2025

- Built a Retrieval-Augmented Generation (RAG) app delivering personalized financial insights and wealth management recommendations.
- Implemented semantic search with FAISS vector database via LangChain for context-aware query resolution.
- Integrated Google Gemini API using **langchain-google-genai** for advanced LLM reasoning over financial documents.
- Developed unit tests for API flows, retrieval pipelines, and query-response validation.

TECHNICAL SKILLS

Languages: Python, C, Java, Go, SQL (Postgres)

Computer Science: Data Structures, Algorithms, OOP, DBMS, Operating Systems

Frameworks: FastAPI, Flask, RESTful APIs, React (Vite), Streamlit

ML & Data Science: PyTorch, TensorFlow, Scikit-learn, HuggingFace, LLMs, RAG, NLP, Pandas, NumPy

Data & Messaging: Apache Kafka, Redis, MongoDB, Vector Databases (FAISS), ETL Pipelines

Cloud & DevOps: AWS (ECS, EC2, ECR, IAM, RDS, S3, ALB), Infrastructure as Code (IaC) – CloudFormation, Kubernetes, Docker, CI/CD (GitHub Actions), Linux, Terraform

Tools & Monitoring: Git, Postman, Power BI, AWS CloudWatch, Prometheus, Grafana

EDUCATION

JSSATE Bangalore

Sep 2022 – Jun 2026

B.Tech, CSE (Artificial Intelligence & Machine Learning)

Bengaluru, India

ACHIEVEMENTS

Amazon ML Challenge 2024  – Ranked in top 0.1% nationwide; built an end-to-end ML regression system under real-world constraints (score: 0.098).
